

In this round you need to solve one of the two challenges mentioned below, in the language of your choice.

<https://github.com/realimage/challenge2016>

or

<https://github.com/RealImage/challenge2015>

Since you're into full stack development, it would be great if you try to build a UI for whichever problem you choose as well. Any library or framework ought to be fine for that. Can deploy it to Heroku so we can take a look.

If you require any clarifications, please mail for queries to srivathsa@realimage.com.

Happy coding!
